PROFESSIONAL SUMMARY

Senior Computer Science student at West Virginia University (May 2027) with strong object-oriented programming skills in Java and C++ and full-stack experience building backends with PostgreSQL, MySQL, REST APIs, and Ruby on Rails. Delivered multiple team-based projects in Agile settings, including a hackathon build and a live demo to judges, and taught technical concepts in a client-facing instructor role. Seeking a software engineering position.

EDUCATION

West Virginia University | Morgantown, WV *Expected May 2027*
B.S. in Computer Science; Minor in Music Technology | GPA: 3.56/4.0
Honors: Dean's List; PROMISE Scholarship and Beneke Scholarship (Wheeling Park High School), all four years
Relevant Coursework: Advanced Software Engineering, Data Structures & Algorithms, Operating Systems (in progress), Database Design, Computer Systems Concepts, Microprocessor Systems (in progress), Digital Logic Design, Discrete Mathematics, Calculus I-III, Statistics

TECHNICAL SKILLS

Languages: Java, C++, C, Ruby, TypeScript, JavaScript, Dart, PHP, SQL, HTML/CSS
Backend / Databases: Ruby on Rails, Node.js, Express, REST APIs, PostgreSQL, MySQL, Firebase, Neon; schema design, relational modeling
Frameworks & Tools: React, Flutter, JUCE, AWS, Azure, Docker, Git/GitHub, Agile/Scrum, VS Code, Visual Studio, WSL

PROJECTS

WVU Cyber Sandbox Portal | Ruby on Rails, AWS *Senior Capstone, 2026*
- Developing a web portal for the WVU Cyber Sandbox in a 3-person Agile team over 5+ sprints, using Ruby on Rails (MVC) for the application and server-side logic
- Building and deploying the backend on AWS-hosted infrastructure, working within strict cloud cost constraints as a student project

Byte Syzed: Dietary Safety App | TypeScript, Flutter, Dart, Node.js, PostgreSQL, Docker *Advanced SE Course*
- Developed a mobile app that filters 20 to 35 local Morgantown restaurants using 10+ dietary and allergen filters
- Built REST API endpoints in Node.js backed by a 4-table PostgreSQL database; implemented weighted safety rankings and bitmask allergy filtering
- Collaborated in a 6-person Agile team across 3 sprints using Git/GitHub workflows; used Docker for containerized development and deployment

Votr | TypeScript, Neon, PostgreSQL *Steel Hacks 2026*
- Built a web app that encourages Gen Z voter turnout by presenting unbiased voting information, with a 4-person team in a 24+ hour hackathon
- Implemented the PostgreSQL backend on Neon serverless Postgres, with TypeScript application logic on top of the data layer

Mapchat | PHP, MySQL, Raspberry Pi *Software Engineering Course*
- Added weather functionality to a social media-style app, with a PHP backend and MySQL database
- Hosted the full application on a Raspberry Pi and presented a live mock demo to a panel of 3 judges

Delay Audio Plugin | C++, JUCE *Independent Project*
- Designed and built an audio delay plugin in C++ using JUCE, applying object-oriented design through the framework's processor and editor class structure

EXPERIENCE

VEX Robotics Instructor | iD Tech at Carnegie Mellon University | Pittsburgh, PA *Summer 2025 & 2026*
- Taught programming and engineering concepts to groups of 4 to 12 middle and high school students, adapting explanations to each student's skill level
- Diagnosed and resolved student code and hardware/software issues, working through problems step by step
- Led collaborative engineering projects and competitive robotics activities
